

ABSTRACT

CYCLE PEDAL WITH ADJUSTABLE AXIAL POSITIONING

5 The pedal comprises a pedal body having hooks, and a
cartridge containing a pedal axle and which is received in
a transverse recess of the pedal. This recess is provided
with a tapping coacting with a screw thread on the
cartridge to permit the continuous adjustment of the
10 transverse position of this latter, and holding elements of
the cartridge in a transverse position. The holding
elements comprise a ring for blocking in rotation the
cartridge adapted to be connected to the cartridge by
positive locking members provided on one end of the latter
15 and positive locking members provided on the ring.
Gripping elements are provided to grip the ring against the
cartridge.
